U. S. Patent Application No.: 10/699,963 Amendment Dated April 24, 2006 Reply to Office Action of March 23, 2006

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the above-captioned patent application:

## **Listing of Claims:**

1. (Currently Amended) A high voltage surge protection device adapted for use in a CATV system that includes a coaxial cable having a central conductor, an outer conductor concentrically positioned in surrounding relation thereto, and a dielectric layer disposed between the central and outer conductors, said surge protection device comprising:

a housing having an input end and a body portion that defines an internal cavity;
an electronic electrical component positioned entirely within said cavity; and
an electrically conductive, surge protective element positioned between said input end
and said electronic electrical component, and in electrically operative communication with
said body portion;

wherein said surge protective element is a ring, and where said ring is configured to surround and to not make physical contact with a conductive pin included within said electrical component and where a portion of said ring is in physical and electrical contact with a shoulder formed within said body portion of said housing.

- (Previously Presented) The high voltage surge protection device of claim 1, wherein said surge protective element includes at least one prong extending radially inward from said ring.
- 3. (Previously Presented) The high voltage surge protection device of claim 1, wherein said surge protective element is of a width that is about 0.020 inches.
